

# MetroControl™

## Addressable Mode for HID Lamp Control System

The MetroControl™ system is an ideal solution for the central control and monitoring of industrial and commercial HID lighting installations. This affordable solution offers an easy to operate graphical user interface together with sophisticated built-in modules, such as a daylight harvesting scheduler and a system alerts and notifications mechanism. MetroControl™ optimizes the usage of SuperHID™ electronic ballasts, and really saves energy.

### Superior Features

- Displays a fully configurable visual representation of the structure of your organization
- Supports control and monitoring of both centric and distributed installations
- Supports manual and automatic dimming control for maximum energy savings
- Supports the aggregation of ballasts into logical groups
- Offers the ability to turn ON, OFF or DIM each logical group or individual lamp, either manually or using a predefined schedule
- Easy to use, simple configuration management and intuitive graphical user interface
- Monitors and logs the status and output values of each lamp in an installation
- Generates lamp failure alerts and notifications
- Very simple, plug & play installation
- Ideal for malls, factory storage, gas stations, warehouses and more

Powering the World of Light
